```
$ whoami
```
Senior full-stack engineer (7+ years) now shipping Generative AI at Tractable: LLM pipelines and model serving for vehicle-damage assessment. Hands-on with AI agents, RAG, LLM evaluation and voice AI, from React to Kubernetes.

Skills

Generative AI `LLMs` `AI Agents` `LangGraph` `LangChain` `MCP` `Tool Calling` `Retrieval-Augmented Generation (RAG)` `Embeddings` `Vector Databases (Qdrant, pgvector)` `Multimodal LLMs` `OpenAI API` `Prompt Engineering` `Voice AI (STT/TTS)`

LLMOps `LLM Evaluation (RAGAS, LLM-as-judge)` `Guardrails` `Observability (Langfuse, OpenTelemetry)` `AWS SageMaker`

Backend `Python` `TypeScript` `Node.js` `FastAPI` `REST APIs` `Microservices` `Java (Spring)` `Redis` `Temporal` `PostgreSQL` `SQL`

Frontend `React` `Next.js` `JavaScript` `Tailwind CSS`

Cloud & DevOps `AWS` `Azure` `Docker` `Kubernetes` `CI/CD (GitHub Actions)` `Git` `Claude Code`

Experience

Senior MLOps Engineer • Tractable • Noida, India — Jul 2025 – Present

Promoted from MLOps Engineer (Jul 2025 – Jun 2026)

> Built the LLM pipeline for car damage detection from inspection videos (**~4,000 API requests/day**), combining multimodal LLMs (Gemini, OpenAI GPT) with segmentation models; cut manual inspection from **40–50 to 4–5 min (90%)**.
> Deployed research-team computer vision models on AWS SageMaker endpoints at **400 ms p95** per image.
> Built the serving API layer in TypeScript and Python with Redis queues and Temporal workflows for asynchronous video processing; cut end-to-end API latency from **2.5 min to 80 s**.
> Owned features end to end with insurer and dealer customers: requirements, React/TypeScript front ends, PostgreSQL, and Kubernetes deployments via CI/CD (GitHub Actions).

Senior Software Engineer • Capgemini • Pune, India — Feb 2025 – Jul 2025

> Lead developer for Java (Spring) telecom microservices; owned architecture, performance and mentoring.

Senior Software Engineer • Capgemini • Toulouse, France (client onsite) — Jan 2023 – Jan 2025

> Led a team of **7 engineers** onsite at an aerospace client, raising sprint velocity by **25% in 6 months**.
> Shipped product features across React, Java (Spring) and Python (Flask) services with client stakeholders.

Consultant • Capgemini • Mumbai, India — Jul 2019 – Jan 2023

Promoted twice: Senior Analyst → Associate Consultant → Consultant

> Built a **production digital twin platform** for logistics and construction (React, Node.js, AWS, Azure).
> Turned customer requirements into solutions and proofs of concept; coordinated production deployments.

Projects

TriageBot — **Agentic GitHub issue triage**
Agentic LangGraph pipeline (planner, researcher and drafter agents) with MCP tools and E2B-sandboxed bug reproduction; risk-scored actions go through human approval (LangGraph interrupts), with prompt-injection scanning and Langfuse tracing.

Fryday — **Real-time Hindi/Hinglish voice assistant**
Fully on-device (Apple silicon) streaming voice pipeline: Silero VAD, Whisper, Qwen3-4B 4-bit on MLX and Kokoro TTS over WebSockets with barge-in; **~2 s median turn latency**, 0.23 s to first LLM token; strict typing, contract tests, CI.

DocMind — **Production RAG with evals, served over MCP**
Hybrid BM25 and dense retrieval (Qdrant, RRF) with cross-encoder reranking: **recall +9 pp**, **MRR 0.70 to 0.80**; Redis semantic cache cut LLM cost **22%**; SSE streaming; RAGAS and LLM-as-judge evals with judge calibration.

Education

B.Tech, Industrial and Production Engineering • National Institute of Technology (NIT) Jalandhar • CGPA 8.39/10 • 2019
